Abstract (en)
[origin: EP0857545A2] The foot for a clamping device may be used on a workpiece with an uneven surface. There is a ball (3) on the end of the screw spindle (8) which fits into a matching spherical socket with a conical or funnel-shaped entry and an O-ring in the neck whose inner diameter is slightly smaller than the outer diameter of the ball. The socket is formed in a bridge or compensating lever (15) which can tilt. The lever has bores or cutouts (16) which accommodate further balls which fit into tiltable feet (4) which engage the workpiece.
