Abstract (en)

[origin: EP0857634A1] The running gear installed on the ends of the goods wagon, together with the load carrier(2), are longitudinally movable in relation to the underframe(1). Each running gear with the corresponding end section of the load carrier is rigidly retained playfree in the longitudinal direction over a support beam(4). The support beam on one side has a pivot(5) for connection of the running gear, and on the other side has a support bearing(6) to accommodate a stop(7) rigidly connected to the load carrier.
