Abstract (en)

[origin: EP0857635A2] For connection of the transverse beams (3,4) to the longitudinal beams, a tubular section of each transverse beam with the two web plates and upper boom forms an intersection. The web plates have a cut-out(30) originating from the upper edge of the web plate and corresponding to the external diameter of the tubular section, and the upper boom has a break. The transverse beam consists of two outer tubular sections(15) and a centre axially displaced section(16), with the outer section and centre sections intersecting along generatrix.
