Abstract (en)  
[origin: EP0857851A2] A combined roller shutter guide and wall cavity closure consisting of a one-piece plastics extrusion of substantially uniform cross-section along its length, the extrusion having a guide channel (1) for guiding an edge portion of a roller shutter, a first insulation receiving channel (2) open in a direction opposite to that of the guide channel (1) and for retaining a length of insulation material (3), said first channel (1) sharing a wall (6) with the guide channel (1), a second insulation receiving channel (4) open in the same direction as the said first channel (2) and for retaining a length of insulation material (5), said second channel (4) sharing a wall (7) with the first channel (2), and retaining grooves (12, 15, 16) along the length of the extrusion for receiving and retaining a portion of an appropriately shaped tie for locating the extrusion in the cavity of a wall, the grooves extending in the direction of extrusion and being positioned so that ties located therein retain the extrusion in opposite sides of the wall cavity. <IMAGE>
