Abstract (en)
[origin: EP0857918A1] The oven door has a frame-like support for holding at least one panel element. The frame wall (2) and frame base form a one-piece profiled frame section (1) of the frame-like support which can be made by shaping or milling. The profiled frame part has a panel bearing member (6b) for a first panel element (11) and a holding face (7) for a second panel element (12). The holding face can be arranged on the outside door part of the second panel element. A spacer can be moulded integral on the profiled frame part.
