Abstract (en)
[origin: EP0857925A2] The wall heater has a housing (1,1'), which encloses a board which acts as a support (2) for a burner and its accessories and hydraulic components. The support is in the form of a bent step (3) at roughly the middle level of the housing. The step has a mounting plate (4) which is bent upwards parallel to the plane of the surface (F) of the support. The latter is connected between sheet metal panels (6), which form side components of the housing, and which have bent edges. The supporting surface, the step, and the mounting plate have bent edges (7) for reinforcement purposes.
