Abstract (en)
[origin: EP0857928A1] The insulating housing has housing outer wall with inner wall spaced from it, which together enclose an intermediate (15) space that can be evacuated at least across a connecting point, and which is filled with an evacuable heat insulation material, for the support of the walls surrounding the intermediate space. Within the intermediate space, a duct is provided, running at least predominantly covering surfaces when passing through, and which is connected with an evacuating connection (24) using flow engineering. At least one collection point is provided in which ducts (21) open out.
