Abstract (en)
The invention relates to a push-button arrangement with a push-button cover which is adjustable in a switch strip to a limited extent, and which actuates a push-button switch arranged on a board by means of a ram, and which, after it has been released, returns into its initial position by means of spring power. The outlay for the construction of the push-button arrangement is reduced in that the fibre-optic light guide, which is under initial tension and goes out on springs, is supported on the push-button cover and the push-button switch, and in that an LED is integrated into the push-button switch. <IMAGE>
