Abstract (en)

[origin: WO9716610A1] The improved system with modular elements for constructions according to the present invention comprises: modules with joints having a flexible or ultraflexible arrangement; a polyfunctional modular element for perforations like hollow spaces; a plurality of canalizations transversal to the vertical holes; a plurality of deep groovings, arranged on the edges of the modules with hollow spaces; a polyvalent modular element, complementary to the normal modules, provided with horizontal tappings (10, 23, 24) separated in a plurality of projecting rostra; a polyvalent module with hollow spaces or with a complete circuit of vertical perforations, possibly connected and/or that may be connected with convenient horizontal groves; a plurality of kinds of joints - prismatic, with an arc or in two separate rostra - as those realized on the special module.
