Abstract (en)  
[origin: EP0858753A2] The side parts (1) each have rapid-fastenings (14) for the drawer's front (5) and which are detachably connected to front flanges (15) each. The front flanges are bent outwards at right angles from the side parts. An operating lever (16) is joined to a rotary cam the tip (26) of which pressed onto a clamping-jaw (27) and pulls back a transverse arm (24) which at the same time moves two movable cores (23) positioned in expandable dowels (17). The dowels fit through guide-slots (21,22) in the front flanges into seatings (18) in the drawer-front and fix them to the side parts.
