Abstract (en)

[origin: EP0858891A1] The method involves a printer which comprises a rubber blanket (3) and printing cylinder (1), an inker unit (16) and a damping system. The offset printer has a control stand (7) containing a signal processor(8) which has inputs for the control/repeat-back signals of a central setting of metering elements, ink-strip width or lifting cycle. The output of the signal processor is connected to the input of a function generator (9) in the form of a digital storage which is itself connected to a control (6) of the washer (5,5a,5b).
