Abstract (en)
[origin: EP0859190A2] The oil lamp includes a lamp part which has a container (1) that is at least partly filled with a combustible fluid (6) and which has an opening on the top above the fluid level. The opening is covered by a lid (7) which can be pierced by hand using a suitable hand tool and which seals the container in fluid- tight fashion. The container has a flat bottom with at least one spike and is made of plastic. The lid is a foil made of plastic, metal or a compound. The combustible fluid is preferably olive oil. The lamp also includes a wick (8) which is so stiff at its end that it is suitable as a tool for piercing the lid.
