Abstract (en)
[origin: WO9717274A2] The invention relates to a device for setting a roller gap of a folding device of a rotary web press, which device is to be used to set the folding roller gap in a sensitive and accurately reproducible manner. The object of the invention is attained by a rotatable threaded spindle with contrarotating threads arranged at both ends. A drivable differential screw gear is associated with each thread and each gear acts by way of a stop on a second end of a two-arm lever in each case, the folding roller being supported by the first end of said lever.
