Abstract (en)
[origin: WO9717711A2] The invention relates to a simple connecting device for connecting the end areas of a field coil (2) to external conductors, which device enables optional receiving of spring terminals or screw terminals. To this end, the connecting device has fastening domes(4, 6) with recesses (5, 7, 8) into which terminal boards (10) formed to fit the spring terminals and the screw terminals can be inserted by way of angled areas (11, 12). The angled area (11) is supported on the fastening dome (6) when the external conductors are connected.
