Abstract (en)
[origin: WO9717739A2] The invention relates to a circuit board connector with an insulator (3) and a metal housing, which connector has two mating openings each for one plug. Each mating opening has four locking hooks (4) for detachable fastening of an inserted plug. The metal housing comprises a housing member (1) which except on the mating side completely surrounds the insulator (3) provided with contact springs, and a U-shaped metal clip (2) which is arranged with its U-legs pointing in the mating direction centrally between the side walls (8, 9) of the housing member (1) and divides the mating face into two mating openings. Each of the two locking hooks (4) of the metal clip (2) and two locking hooks (4) of the housing member (1) project into the mating openings.
