Abstract (en)
[origin: EP0860136A2] The seat has a seat surface (1) comprised of two parallel spaced apart side sections (2,3), which are connected at their front ends. The side sections have upper support faces (2a,3a) to support the buttocks and upper legs. The space between the side sections is selected so that the corresponding long sides of the back part of the seat surface define an access opening (4) that is open from behind as far as the rear of the seat. Each side section has a projecting section (2b,3b) in the middle part of the seat surface, to support the thighs. The projecting sections project into the access opening, but still leave a narrow space free between them.
