Abstract (en)

Container having a frame (1) that is executed in such a way that it provides proper protection for the loaded crush barriers during transport. The container is locked by a pivotable locking bar (4) mounted to the frame (1). Due to the fact that the beams protrude above the frame, and get between the lower box girders (5) of the upper container on stacking, the containers can not slide from each other during transport. <IMAGE>
