Abstract (en)

The machine has four rollers (11-14), forming an intake roller pair (11,12), a central pair (12,13), and a discharge pair (12,14). The rollers of the discharge pair are positioned on a housing frame. One roller (11,13) of the intake pair and of the central pairs are positioned on a carrier (2), which is located pivoted between two opposite side walls (1a) of the housing frame. The carrier moves in a direction at right angles to one of the two rollers of the discharge pair. The sheet guide channel (4) is connected to the carrier. The second roller (12) is a rubber roller with drive.
