Abstract (en)

[origin: EP0860653A2] The device comprises a spring stirrup (5) with bracing arms (8) connected by connecting rib (7) and fixable to light screen (3) in area of connecting rib. A guide component (6) is arranged in the area of the light housing (2) and has a guide aperture (9) in which the spring stirrup with the bracing arms is adjustably fitted, being held in an upper end position in which the light screen is arranged in the light housing, and in a lower end position. The guide aperture of the guide component is formed as an equilateral triangle and has longitudinal edges, on which the bracing arms of the spring stirrup are located in the lower and upper end positions as well as during adjustment in an electrically conductive fashion. The guide component (6) is a stamped part fixable to the light housing (2) and the guide aperture (9) is formed in a guide surface of the guide component.
