Abstract (en)
[origin: EP0860898A1] The invention relates to a connector with shorting bar. Electrical connections for high security standards must include a shorting bar which is normally constructed of one single planar, generally U-shaped piece of metal forming two springs each of which touching one of the terminals to be shorted. This requires a relatively large amount of package space. The design according to the invention includes two separate pieces of conductive material to form the shorting bar. <IMAGE>
