Abstract (en)
[origin: WO9714515A1] An industrial washing-machine (1) comprises a washing chamber (14) for washing workpieces (45). The chamber (14) has an upper chamber opening, side walls and a bottom wall, of which walls at least one has perforations. The washing chamber (14) is arranged on a first conveyor (2). A second conveyor (3) is arranged in parallel with the first conveyor (2) and comprises an endless conveyor belt (24), which has a lower run, whose underside shuts the chamber opening tight. The lower run is held down against the chamber opening by a stationary slide plate (29), which abuts against the upper side of the lower run. The endless belt (24) has perforations and an injection means (31) is arranged in the slide plate (29) for injection of washing liquid into the washing chamber through the perforations of the belt (24), at least one of the conveyors (2, 3) being adapted to drive the washing chamber (14) past the injection means (31).
