Abstract (en)
[origin: US6151780A] The invention is directed to a dry shaving apparatus, with an electric motor arranged in a housing and with at least one shaving head comprising two inner cutters which are operatively associated with a common outer cutter and are arranged to be driven in relative opposite directions by a drive element against the force of at least one spring element, wherein the inner cutters and the spring element are guided for movement in relative opposite directions by means of a common guide element, the guide element is carried in bracket elements, and the inner cutters are adapted to be acted upon by drive elements movable in relative opposite directions.
