Abstract (en)
[origin: WO9719848A1] Self-contained diving equipment comprising means (10) for refilling a compressed air tank (40) connected via a flexible air tube (1) to a snorkel and a breathing mouthpiece (70). The refill means are deactivated when underwater, and an external air intake (61) is connected via a tube to the mouthpiece to feed air directly from the surface (10) when the swimmer is not underwater. The equipment further comprises a moisture removal device (20) and a filter (21) between the compressor (13) and the tank (40), as well as means (30) for controlling the activation and deactivation of the refilling means.
