Abstract (en)
[origin: WO9709413A1] A method for reducing the dehydrating properties of a fatty acid salt soap is described. In use, the method includes adding to said soap, in order to produce on the skin a film replacing the natural lipid film destroyed or damaged by the soap, talc having the following combined properties: a compacted apparent density substantially lower than 0.70 g/cm³, and a grain size distribution such that the mean diameter D50 of the grains is substantially lower than 6 microns, and the diameter D95 is substantially lower than 20 microns.
