Abstract (en)

[origin: WO9719221A1] The invention concerns a method of obtaining cellulose fibre material from a plant substrate containing calcium pectinate, the plant substrate being solubilized by using trisodium phosphate and optionally bleached. The method is characterized in that the plant substrate is simultaneously treated with borax or pretreated with an aqueous borax solution before solubilization. Preferably the borax is present in an amount of between 0.5 and 10 g, in particular between 1 and 5 g and preferably 3 g per litre of water and the temperature of the solution is in particular between 30 and 60 DEG C, preferably between 40 and 50 DEG C and more preferably 45 DEG C.
