Abstract (en)

[origin: WO9814728A1] A plug (32) with retaining packing (7, 8, 37, 38) for a water faucet cartridge where the packing (7, 8, 37, 38) is made in one piece on both sides of the plug (32). Both the portion of the packing (7, 37) that is on one side of the plug and the portion of the packing (8, 38) that is on the other side of the plug have a part of their surface in contact with and resting on the plug (32) with respect to the axial direction of the plug (32) and being connected to each other by at least one connecting portion (9) that extends substantially in an axial direction in a peripherally continuous manner or by sections through appropriate openings in the plug (32). The packing (7, 8, 37, 38) is formed and shaped on the plug by injecting an elastomer in the liquid state and cross-linking the elastomer.
