Abstract (en)

[origin: EP0861617A1] The kit includes a box with a body (104) and a sliding tray (105) divided by a partition (110) into two compartments (108, 109), one containing a block (107) of the product and the other an applicator (50). The applicator consists of a handle (8) with bristles (6) at one end and a small comb (114) at the other. It can be made from a thermoplastic material which is over-moulded onto the bristles in an injection moulding process. The box and handle are made, for example, from polyethylene, polypropylene, PVC or polystyrene. Variants of the design can have a mirror inside an opening lid and a pull-out applicator or more than one brush.
