Abstract (en)
[origin: EP0861956A2] The catch bolt (1) includes a metallic internal body (7) which extends into the catch bolt hole (4) when in locking position. The metallic body is covered with plastic (8) at least in the area of the catch bolt inclination (5). Preferably, the body has only a metal sheet (9) thickness and has holding formation (10) for the plastic cover. When the door is shut the catch bolt inclination impinges on a closing metal sheet (20) and is spring loadedly locked in the opening of the closing metal sheet.
