Abstract (en)
[origin: EP0861963A2] The glazing involves at least one glass plate which is installed in a window inner facing clad with fire protection plates. On the glass outside a fire-inhibiting glazing frame is arranged. This frame comprises individual glazing arms (7) of fire-inhibiting compound material separated from one another and fixed by means of building screws (9), which are screwed through the window inner facing (6) into a plate (4, 11) behind it. An angularly cross-section frame arm (10) fits over the glazing arm and the connecting edge strip of the wall covering (5). The outside of the glazing arm connects in a flush manner with the outside of the wall covering.
