Abstract (en)

[origin: WO9711706A1] It has now been found that, at certain concentrations, sphingosylphosphorylcholine (SPC) in solution can be used for wound healing at concentrations of from 0.1 μ M to 500 μ M. It has been found that at concentrations of 2 μ M to 10 μ M, very good results could be obtained. Compositions may be prepared using pharmaceutically acceptable carriers for topical application or for injection in or near the site of the wound.
