Abstract (en)

[origin: DE19636524A1] The invention concerns a method for producing a sintered metal part, specially a connecting rod or a filter. Said method is used to form a green compact from a sinterable powder containing binders in a basic forming process having at least one step and by applying pressure and/or heat. Said green compact represents a basic form of a part. It is then given the desired form for sintering in at least one further forming process and afterwards sintered.
