Abstract (en)
[origin: GB2303144A] There is provided a detergent composition suitable for use in laundry and dish washing methods comprising (a) a cationic ester surfactant present at a level of from 0.1% to 2.0% by weight of the detergent composition; and (b) an anionic surfactant present at a level of from 8% to 30% by weight of the detergent composition, wherein less than 9.5% by weight of the detergent is a anionic surfactant selected from the group comprising linear or branched alkyl benzene sulfonates. The cationic ester surfactant is preferably a quaternary ammonium compound where one of the alkyl chains is interrupted by an ester-type linkage. The anionic surfactant may be a sodium alkyl(ether) sulfate in addition to the alkyl benzene sulfonate.
