Abstract (en)

[origin: WO9719286A2] The invention concerns a pipe bend for feed pipes for feeding liquids or gases which may possibly be laden with solids. According to the invention, there is provided a preferably straight centre bend segment (2) of which the outer internal wall generating line meets with the outer internal wall generating line of an outlet bend segment (3) on the pipe bend exterior at a point (S) which forms the point of intersection between the imaginary extension of the inner internal wall generating line of an inlet bend segment (1) and the outer internal wall generating line of the outlet bend segment (3).
