Abstract (en)

[origin: EP0862867A2] At least part of a shoe is constructed with an upper layer (1), a lining (2) with a water vapour-permeable but water-impermeable functional layer (4), a lining sole (6), an insole and an outer sole. The lining has an end region (2') which is turned inwards and is in a common plane with the lining sole. The outer edge of the lining sole is parallel to inner edge of the end region and is joined to it. The insole is has a watertight adhesive bond from underneath to the functional layer and is watertight at least on the surface facing the inside. Preferably the insole has a watertight adhesive bond with the lining sole.
