Abstract (en)

[origin: EP0862892A2] A domestic appliance, e.g. a dishwasher, has a measuring device for registering the dirtiness of the cleaning liquid. A measured value for the adjustment of the device (23) can be registered during a cleaning program in a preceding cleaning program. The measuring value for the calibration of the device is preferably registered at the end of the preceding cleaning program, directly after the last filling with fresh water.
