Abstract (en)  
A gumming device (1) for applying glue (2) to a continuous web (3) of sheet material, in which a gumming roller (4) and dispensing roller (6) which are substantially cylindrical and are positioned parallel to each other are maintained in mutual contact along a common generating line (21) by a thrust device (20) and cooperate with a closure element (25) to define a chamber (27) for feeding the glue (2) to the gumming roller (4); the chamber (27) has a substantially triangular cross-section with a vertex lying on the common generating line (21) in a position facing the closure element (25), and forms part of a closed flow circuit (34) for the glue (2). <IMAGE>
