Abstract (en)
[origin: EP0863077A2] The method involves closing cardboard packages (1) with an upright lid (2) formed on a side wall, which are taken one behind the other through a gluing device and folding tools. Tabs on the side wall and/or cap are glued. The cap is folded and the glued surfaces are pressed to counter-surfaces. The packages with the lid side wall in front are packed in the boxes (5) of an endless box strip (7) running over guide rollers (6). The cap is folded round onto the box-forming dividing walls (8) of the box strip. The boxed cardboard packs are then glued and closed by tools (9) along the path of the strip.
