Abstract (en)
[origin: EP0863099A1] The separating device has holding elements (28) formed into hook grip elements (26), which are driven by a drive device (44) in a plane at a right angle to the stack (16). On the transfer sector (46), the cantilever arm (36) of the hook grip element comes against the gutter of the outermost printed product (14). The hook grip element is then guided on the printed product towards a stop, until the hook gap (38) has gripped the gutter. Up to the transfer point, the direction of motion of the hook grip element has one component acting towards the stop and another acting away from it.
