Abstract (en)

[origin: EP0863258A2] On the canalisation shaft (50) is fixed at least one sealing foil (3) beneath a cover layer (4) of the road cover (1). The sealing foil is connected (A) with a lower peripheral area (53) of the shaft lower parts (51). Above this connection, the cover is arranged in a support position engaging over the shaft lower part and only on a central cover layer. The cover and the shaft lower part are provided as one-piece concrete mouldings. The cover part and the shaft lower part form an assembly, which via the sealing foil and/or an elastic seam material provided between the cover part (52) and the upper cover layer, is integrated in the fluid-tight road cover (1).
