Abstract (en)

[origin: EP0863266A2] The outlet has two open ends (10, 12) to receive and discharge the waste water and a flexible pipe (11) between them. The outlet end (12) is connected to a drain pipe, while the receiving end has a projecting lip which engages with a seal ring (3) round the shower tray outlet aperture. Prior to fitting, the receiving end projects above the outlet aperture, and when it is fitted into place the flexible pipe is bent into the shape of a U-trap. In the event of the trap becoming blocked the receiving end can be disengaged from the seal ring so that the pipe straightens out again to allow the blockage to be removed. The pipe is made from an elastic elastomer material.
