Abstract (en)

[origin: EP0863524A1] The construction has a number of fixed contact points (1) which engage a moving arm contact (2). The moving arm contact is moved longitudinally towards and away from the fixed contact by a series of levers (41,42). The two levers pivot around a central hinge point, sliding the contact into the fixed position (F) or by turning the two levers around, moving the contact to an open position (O).
