Abstract (en)

[origin: WO9720135A1] A method and a device for supplying air to a pressurized combustor (BK) in a gas turbine plant which for pressurization of the combustor (BK) comprises a compressor (C) driven by a gas turbine (GT), which in turn is driven by gases formed during combustion of a fuel in the combustor (BK). The invention is characterized in that the air is supplied to the low-pressure side of the compressor (C) via a pressurization device (F) in which the air is compressed such that air with a predetermined density is supplied to the compressor (C).
