Abstract (en)

Garment for wearing in direct contact with the human body, for example in the form of a vest or singlet to be worn a bare torso, characterized in that it is formed from a layer with large open cells, pervious to air, in which the sweat produced by the body travels as a result of capillarity along the walls of the cells which form overall a heat-exchange surface area substantially greater than the body surface area. Preferably said layer is formed by a polyurethane foam with open cells obtained by means of explosion technique. The cells have a size of at least a few millimetres, for example 4 cells per linear cm (10 cells per linear inch), and the thickness of the layer is at least 8 mm. <IMAGE>
