Abstract (en)

[origin: EP0864262A2] The fixing press system to give an adhesive bond between two fabrics, in garment making, has fluid channels (30,31) along the length of the hollow profile heating bodies (19). The fluid channels (30,31) are at the upper cross section (29) in contact with the conveyor belt and/or in the opposite lower cross section (28) of the hollow profile body (19). The heater is at the centre section (20) of the heater body (19). When in operation, a fluid with good thermal conductivity flows through the channels (30,31).
