Abstract (en)
[origin: DE19710945C1] Two profiled portions (1) of the same size are spaced apart on each side. These can be situated at the corners of the mounting and can be of strip-shape, or can enclose the corners, being of angular section, with their flanges (1a,1b) of the same thickness or length. On the inside (3) of the apex of the angular component there can be a profiled protrusion (4), sliding into a mating groove in the corner of the mounting. The top surface of the component can be radiused, sloping downwards and outwards.
