Abstract (en)
A blow-out container for blowing out a liquid in a liquid reservoir through a blow-out portion, wherein the liquid reservoir and the blow-out portion are communicated together through a liquid flow passage, an elastic valve with a slit is disposed at the blow-out portion, an engaging means is provided so that the elastic valve will not be detached from the blow-out portion, and the liquid reservoir is so designed as to change its volume depending upon the use of the liquid. <IMAGE>
