Abstract (en)

[origin: EP0864405A2] A method for manufacturing laminated-wood tiles with surface machining comprising the steps of: forming, on both faces (11,12) of a tile (10), surface machinings by chip-forming so as to produce symmetry with respect to a plane which is parallel to the faces (11,12) and passes through a centerline. Directly after the chip-forming machining, the faces (11,12) are subjected to a surface treatment with a varnish suitable to seal the pores of the wood. The resulting tile (10) thus has both faces (11,12) machined by chip-forming with symmetrical machinings.
