Abstract (en)
[origin: EP1310608A1] A roofing or screening system has a support comprising a glazing bar (40) and a member (42) that slides longitudinally over part (44) of the glazing bar to be retained thereby. The member then presents hooked profiles (46) to opposite sides of the glazing bar. Hooked edged portions (28) of panels (22) interengage with those profiles to be retained to the support. A cap (54) is clipped over the glazing bar to shield the joints. End glazing bars (60, 160) and a wall mount (25) are also described. <IMAGE>
