Abstract (en)

[origin: EP0864718A1] The support (1) has two spaced apart (2) fixture sections (3,4) with aligned fixture holes (5,6). A component (7) is held on the support by means of a screw connection, and has an opening (8) flush with the two fixture holes and through which is inserted the shaft (11) of a cap screw (10). The screw's threaded part (14) facing away from the head (15) fits in a nut's thread (17'). The cap screw has a further threaded part (12,16) with a larger diameter than the adjacent head. A further nut thread (16') is held in the first fixture hole (5). The thread (17) of the threaded part has a shallower pitch than the thread (16) of the further threaded part (12).
