Abstract (en)  
[origin: EP0587303A2] An electrical shielded data connector includes an inner terminal support housing (46) carrying a plurality of electrical terminals such as (30) wherein the terminal support housing includes shield members (130) surrounding the terminal support housing (46). The shielded sub-assembly is insertable into an outer housing and is latchably attached therein and a rear support plate (95) and cable support member (110) can be assembled around a cable after the termination of the multi-conductor cable. The cable support member (110) can be positioned in one of two orientations to provide for either a straight through or an angled cable exit. A cross talk shield (200) is positioned in a stuffer cap and is situated between adjacent terminals (30) when in the final position. Another cross talk shield (220) is positioned in a slot intermediate the terminals (30) at the lower side thereof. <IMAGE> <IMAGE> <IMAGE>
